III

I think that we need to protect the world's environment. The following are two ways I try to achieve it.

Firstly, I try to save energy by buying low energy electrical goods such as long life light bulbs. I also turn them off

when I am not using them. Secondly, I try to reduce the amount of rubbish that I produce. I do this by buying products

with less packaging, and only buying what I need so that it doesn't expire before I can use it. These are two ways I try to

reduce my impact on the environment. (99 words)
